(57)Abstract:

PROBLEM TO BE SOLVED: To easily retrieve a desired address from among previously registered plural addresses by providing a means for retrieving an address including a designated specific character string from among the plural addresses previously registered in a storing means at the time of designating a specific character string.

SOLUTION: Addresses retrieved by a CPU 1 being an address retrieving means are displayed on a display means 4 to select a destination address from these to start data transmission. Namely, after setting an original in the state of stand-by, the character string of a part of the destination address is inputted. The address including the inputted character string is retrieved from the table of an opposite party and an address found first is displayed on the displayed part 4. When the displayed address is not the desired destination address, a character string following the inputted character string is furthermore inputted to retrieve the table of the opposite party again to display the address including the inputted character string inputted after setting the original. When the desired address is displayed, a start key is operated.
